

Go Fish Card Game (Python)

This is a fully functional two-player **Go Fish** card game built in Python 3. This program demonstrates an understanding of functions, loops, conditions, and game logic.

#Features

- creating 52-card deck with suits and ranks
- Automatic dealer assignment
- Turn-based gameplay(player vs. computer)
- real card drawing
- Detection and removal of completed books
- Score tracking and winner announcement

#Learning Highlights

- Creating and using functions effectively
- Handling lists and nested loops
- Using input validation and recursion
- Structuring a complete, interactive Python program
